Calogero Cristodaro

COST Action TU1302 Short Term Scientific Mission Visitor at the Finnish Geospatial Research Institute (FGI), National Land Survey of Finland (NLS)

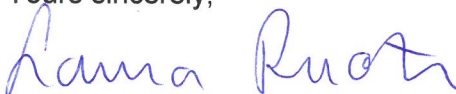

Dear Prof. Stoilov,

Mr Calogero Cristodaro made a 2 week Short Term Scientific Mission at the Finnish Geospatial Research Institute (FGI), Department of Navigation and Positioning, from November the 7th to November the 18th. During his visit, he worked under my supervision with a team of researchers at the FGI's Department of Navigation and positioning.

During the Short Term Scientific Mission (STSM), he carefully planned a collect and playback experiment, prepared the equipment for collecting GNSS time series in urban environment, committed exhaustive data collection campaigns including hundreds of kilometers of test route, and analysed the performance of different GNSS terminals using the Key Performance Indicators typical for the ITS sector. After the visit he has already written a scientific paper about the experiments and results and submitted that to the ION ITM conference to be held in January.

During the STSM Mr Cristodaro expressed excellent scientific skills and commitment to the work and for attaining the goals set by SaPPART. He worked persistently to overcome technical issues faced in the beginning, collaborated with the scientists at FGI in a way very beneficial for both parties, fulfilled the scientific goals set by the STSM very well and processed and analysed the data in a way that it benefits both the SaPPART Guidelines preparation and also the scientific ambitions of SaPPART.

Yours sincerely,

Dr Laura Ruotsalainen,

Deputy Director, Department of Navigation and positioning,
Finnish Geospatial Research Institute (FGI),
National Land Survey of Finland (NLS)
